

## **CultTech Testimonial**

The MSc in Cultural Heritage Materials & Technologies is a unique and innovative program that blends together the use of new technologies for the sake of cultural heritage in the 21<sup>st</sup> century. By being a part of this program, I was given the opportunity to increase my level of knowledge on the field, and explore new dimensions particularly in the non-destructive analysis of materials that are related to art and archaeology, and in the investigation of the potential impact of climate change to cultural heritage assets. I chose the MSc CultTech because all the courses are taught by highly distinguished professors from the major research institutes of Greece, a fact that makes it quite demanding, and also very competitive. This program provided me with all the necessary tools in order to fulfill my medium-term career goals and pursue an internship. Studying at the University of the Peloponnese in the city of Kalamata for one year was a great and unforgettable experience.
