

CultTech Testimonial

The Master of Science in Cultural Heritage Materials and Technologies is an innovative program which fills a gap that existed in the field of study and Management of the Cultural Heritage, combining knowledge from different scientific disciplines. It is very well organized, with a careful selection of scientific staff and modules that make it pioneer in science of CH. Having as starting point my working experience as permanent employee of the Ministry of Culture and Sports in the field of Conservation of Antiquities, I decided to attend this program, aiming to complement and enrich my knowledge as well as to better address issues presented in my work. The modern materials and the new techniques and technologies which are taught, contributed to the systematization of my knowledge concerning the pathology, maintenance and selection of the appropriate methodology for restoring and analysis of archaeological findings. Benefited from the acquired knowledge, I intend to continue the study and research of issues related to the field of conservation.

Aikaterini Panagopoulou, Academic year 2015-2016
