

Culttech Experience:

The MSc in Cultural Heritage Materials & Technologies offered by Peloponnese University as a graduate program provides a broad spectrum of knowledge from multiple specialists in their topics. As an archaeologist, the program enabled me to approach the cultural materials and heritages from different aspects such as archaeometry, heritage management, GIS and Statistical analysis use. According to my experience, I believe that one of the most important thing the MSc program provides is hands-on application of technologies which enables one to learn and compare the techniques. Throughout my master courses provided in English, I was able to understand the basic theories behind each technique and how to apply them to my own research. My experience of MSc was made much easier by the fact that I was able to reach whatever I needed for my studies thanks to the library and laboratory facilities. During my thesis research I focused on ceramic studies and thanks to the network of researchers I was introduced to through Culttech program, I was able to work at the Department of Material Science in the National Center of Scientific Research at Demokritos and practice SEM-EDS technique. I believe that the Culttech MSc program provided me with new skills, directions and opportunities for my future career and I would highly recommend this program to anyone.

Duygu Ertemin, Academic year 2018-2019
